One of the most important things for either a man or woman to know or at least make the effort to learn, is what makes their significant other tick. You must be alert and attentive to the wants and the needs and the desires of the other, put them first in your life. In order to make Valentine's Day a spectacular it's essential that you truly know the heart and desires of your mate. The investment of time and effort and thought during the year leading up to Valentine's Day are critically important. The expenditure of that time and effort to gain that knowledge is the investment that shows the love for one another is not just a one day a year thing. Real love is earned every day of the year and not just on special occasions. It is not enough to buy a card and some flowers the day before or the day of Valentine's Day. It truly is not the present or the card or the flowers that express the messages you want to communicate to the loved one you chose above all others. The present is the time and the effort as well as the card and the flowers together that is the ultimate expression of the love you feel and the love you share. You can only fail to show your love and cause the "I am taking you for granted" feeling if you don't make the properly directed effort to be actually interested in your loved one every day. Then you can show on one day, Valentine's Day, what effort you have made all year long to that one person you love. The evidence of your efforts is the actual gift on Valentine's Day. The time it took you to think ahead, find out what was important to the one you love and to arrange the shopping spree, the purchase of the jewellery, the tickets to the game or the show or to prepare the special meal is actually the gift of love. Properly directed, thoughtful time and effort throughout the year are the evidence of your love. The card and the flowers and the unexpected actions are intended to reveal the evidence of your love. You must give of yourself in order to give the love you want to share with your loved one. The day to day effort you expend to know and to understand the one you love is what is important. Finding out their inner secrets and wants and needs is the effort required to make a Valentine's Day special. If both the man and the woman make that daily effort to know one another better every day, then there will be love.

You know that great improvement initiatives abound. What you may not know is how to implement them effectively; get fast, dramatic improvement; and sustain those results for the long term. It's a common problem. But take heart: The next wave of performance excellence is here—the seamless integration of today's leading improvement methods. This integration, described thoroughly in this book, builds upon the strengths and addresses the shortcomings of each discipline. For example: While Six Sigma provides a disciplined, quantitative approach, many efforts fail because they don't address the people side of performance improvement and change management. Plus, Six Sigma efforts are expensive and take too long to produce results. Lean Manufacturing techniques can provide quick results, but they lack quantitative tools to reduce variation, and, as a result, are incapable of addressing numerous high-dollar improvement opportunities. Though High-Performance Organizations (HPO) create conditions for great motivation, improve intra-organizational interactions, and lower employee turnover, many HPO interventions fail to produce solid business results because members lack a disciplined approach and the tools for improvement.

When the flood waters of Hurricane Katrina receded around New Orleans, they revealed unimaginable destruction and a traditional disaster recovery process that was Byzantine, costly, and far too slow for the victims who just wanted to get home. *Getting Home* is the inspiring story of a defense lawyer and a school teacher who left their careers to rebuild homes for desperate survivors but wound up reconstructing the entire process for rebuilding after disasters. Authors Liz McCartney and Zack Rosenberg describe how SBP, the disaster relief nonprofit they founded, partnered with Toyota to apply the lean principles of the Toyota Production System to rebuild homes and lives following hurricanes, tornadoes, and floods throughout the U.S. and its territories. For lean thinkers, this story offers a fresh look at lean tools being used in non-traditional settings. With a short-term volunteer workforce, a layer of middle management that turns over every 10 months, and constantly shifting sources of income, SBP seemed like it could never escape a constant cycle of emergencies and triumphs. Using lean tools, however, Liz and Zack got their work processes under control and found the time to think deeply about the nature of disasters and rebuilding and found themselves with a clearer mission. The book also details an innovative, 9-step blueprint for how private industry, relief agencies, volunteers, and all levels of government can work

together to dramatically shrink the time between when disasters hit and victims get home in a prompt, efficient, and predictable way. \_\_\_ "In these pages, you will read and be inspired by the spirit of a defense lawyer and a school teacher who left their careers to rebuild homes for the most desperate survivors of Hurricane Katrina in New Orleans. What Liz McCartney and Zack Rosenberg quickly discovered about this work is that the duration of time between disaster and recovery inflicts an immense toll on people. They were determined to do better and Toyota wanted to help. By sharing the Toyota Production System with SBP, we helped them reduce the home rebuilding time by about 50%." - Jim Lentz, CEO, Toyota Motor North America, Inc

In 2005, Goodyear's research and development (R&D) engine was not performing up to its full potential. The R&D organization developed high-quality tires, but the projects were not always successful. Goodyear embarked on a major initiative to transform its innovation creation processes by learning, understanding, and applying lean product development principles. Within five years, Goodyear saw its product development cycle times slashed by 70 percent, on-time delivery performance rise close to 100 percent, and throughput improve three-fold - all achieved with no increase in the R&D budget. *Lean-Driven Innovation: Powering Product Development at The Goodyear Tire & Rubber Company* describes in great detail how the Goodyear team was able to achieve such

significant improvements. Revealing the ups and downs of this successful transformation, the book shares experiences of how this seismic change was managed, how people were engaged, and how Goodyear dramatically reinvigorated its product development and innovation processes—and, in the process, delivered substantial more value to customers and to the company. The book also explains how lean product development helped Goodyear dramatically improve revenue by having every new product available when the market needed it. Presenting wide-ranging perspectives from all levels of leadership, this book is ideal for anyone in R&D daring to take on a lean initiative in R&D or who is struggling with a lean transformation that is not delivering to its full potential. Since the book focuses on universal lean principles, it is as insightful to other manufacturing and nonmanufacturing disciplines in any industry as well. The book presents invaluable insights gained by the author during his 36 years within Goodyear, of which 10 have been directly involved in trying to develop, implement, and sustain lean to achieve the company's business objectives. It distills ideas, practices, failures, and successes into key principles that lean product development practitioners can easily implement. After reading this book, you will gain a practical path for applying lean to the innovation processes of your organization, including where to begin and what to do, regardless of the industry and the status of your transformation.
