There is a strong and growing shortage of qualified entrepreneurs and managers in the SME sector, and this is the main factor hampering further development in all European countries. To meet these challenges, there is an urgent need to raise the qualification level of master craftsman training (German Meisterausbildung) as effective entrepreneurship training according to the needs of entrepreneurial activity and to introduce entrepreneurship education at academic level. The aim of the "Bachelor & Meister" project, which ran from September 2017 to August 2020, was to develop an innovative learning approach in the form of a dual integrated degree programme combining the advantages of master craftsman training and university studies. During the 3-year project duration, 2 different models of the dual integral study courses were developed: the dual integral study course "Civil Engineering" and "Electrical Engineering". The testing of the dual integral study course "Civil Engineering" in Germany was initiated. This publication contains the relevant information like curricula, examination regulations or experiences as results of the project Bachelor & Meister with the following partners: Hanse Parlament (DE), hochschule 21 (DE), Satakunta University of Applied Sciences (FI), Poznan University of Life Sciences (PL), Wielkopolska Crafts Chamber in Poznan (PL) and Vilnius Gediminas Technical University (LT).

The aim of this book is to incorporate Marshallian ideas such as external increasing returns and monopolistic competitions into the general equilibrium framework of Walrasian tradition. New chapters and sections have been added to this revised and expanded edition of *General Equilibrium Analysis of Production and Increasing Returns* (World Scientific, 2009). The new material includes a presentation of equilibrium existence and core equivalence theorems for an infinite horizon economy with a measure space of consumers. These results are currently the focus of extensive studies by mathematical theorists, and are obtained by an application of an advanced mathematical concept called saturated (super-atomless) measure space. The second major change is the inclusion of a simple toy model of a liberal society which implements the difference principle proposed by J Rawls as a principle of distributive justice. This new section opens up a possibility to connect

theoretical economics and political philosophy. Thirdly, the author presents the marginal cost pricing equilibrium and discusses welfare properties of the external increasing returns, which also belong to Marshall/ Pigou tradition of the Cambridge school. Finally, a new mathematical appendix treats basics of singular homology theory. Although the fixed point theorem is originally a theorem of algebraic topology, most economic students know its proof only in the context of the differentiable manifold theory presented by J Milnor. Considering the significance of the fixed point theorem and its playing a key role in general equilibrium theory, the purpose of this new appendix is to provide readers with the idea of a proof of Brower's fixed point theorem from the 'right place'. This volume will be helpful for graduate students and researchers of mathematical economics, game theory, and microeconomics.

By the end of his long life, B. F. Skinner (1904-1990) had become one of the most influential and best known of psychologists (Gilgen, 1982; Heyduke & Fenigstein, 1984). An important feature of the approach to the study of behavior that he championed, behavior analysis, is the intensive study of individual subjects over time. This approach, which is characterized by the use of within-subject experimental designs, repeated and direct measures of behavior, and graphic analysis of data, stands in marked contrast to the research methods favored by many nonbehavioral psychologists. Skinner discussed the advantages of his approach in a number of books (e.g., Skinner, 1938, 1953, 1979), but never devoted a book to methodology. Sidman (1960) and Johnson and Pennypack (1993b) did devote books to behavior analytic research methodology. These books are of exceptionally high quality and should be read carefully by anyone interested in behavior analysis. They are sophisticated, however, and are not easy reads for most neophyte behaviorists. Introductory-level books devoted entirely to methods of applied behavior analysis (e.g., Kazdin, 1982; Barlow & Hersen, 1984) are easier to understand, but somewhat limited in coverage.
